Subject: Offsite wells

I spent some more time going over the file of Missouri certified wells that John provided. I now believe that the wells I found at the hospital and the wells that I found near Bridgeton Trails Drive are actually wells associated with the former Weber (now Progressive Waste) landfill. There are no owner names listed for the wells at the hospital but most of them are identified as PGW-no. which looks to me like they are Progressive Waste wells. Most of the wells at Bridgeton Trails Drive list a Mark Ramsey as a contact. He is also list on at least one of the wells at the Weber quarry. Therefore, I now believe that these wells are all part of the quarry/landfill monitoring network but are just mis-located likely due to the use of the Section center or quarter-quarters for locating these wells.
